學號:\_\_\_\_00557149\_\_\_\_

日期: 2019.06.09

#### 一、想法

由老師提供的程式碼為基底,做出隨機產生上下左右指令(右上方紅色字樣), 且指令出現後隨即消失。遊戲者須遵照此指令做出相應方向之動作,若完成則可 獲得一分,且得到新指令;若未完成,則指令不變,直到完成。

### 二、演算步驟、重要程式片段說明

1.

```
def fn(img):
    digit = random.randint(1, 4)
    return digit
```

利用此函式隨機產生出 1~4 中之一整數,其各代表"右左下上"指令

2.

```
cv2.putText(img,'SCORE:',(300,50),cv2.FONT_HERSHEY_PLAIN,4,(255,255,255),3)
cv2.putText(img,str(score),(520,50),cv2.FONT_HERSHEY_PLAIN,4,(255,255,255),3)
```

在書面顯示出 SCORE, 且不停更新

3.

```
if left/2 > right and left/2 > down and left/2 > up:
    cv2.putText(imgf,'Right',(0,50),cv2.FONT_HERSHEY_PLAIN,4,(255,255,255),3)
    if digit == 1:
        score += 1
        digit = fn(img)
elif right > left and right > down and right > up:
    cv2.putText(imgf,'Left',(0,50),cv2.FONT_HERSHEY_PLAIN,4,(255,255,255),3)
    if digit == 2:
        score += 1
        digit = fn(img)
elif down/2 > left and down/2 > right and down/2 > up:
    cv2.putText(imgf, 'Down', (0,50), cv2.FONT_HERSHEY_PLAIN, 4, (255, 255, 255), 3)
    if digit == 3:
        score += 1
        digit = fn(img)
elif up/2 > left and up/2 > right and up/2 > down:
    \verb|cv2.putText(imgf, 'Up', (0,50), cv2.FONT\_HERSHEY\_PLAIN, 4, (255, 255, 255), 3)|
    if digit == 4:
        score += 1
        digit = fn(img)
```

判斷所做動作是否符合指令,若符合則分數加一,且產生新指令

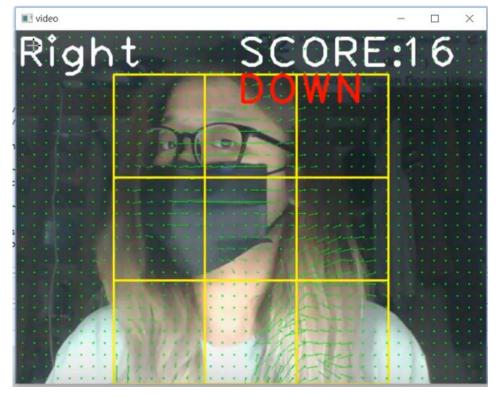

4.

```
if digit == 1:
    cv2.putText(img,'RIGHT',(300,100),cv2.FONT_HERSHEY_PLAIN,4,(0,0,255),3)
elif digit == 2:
    cv2.putText(img,'LEFT',(300,100),cv2.FONT_HERSHEY_PLAIN,4,(0,0,255),3)
elif digit == 3:
    cv2.putText(img,'DOWN',(300,100),cv2.FONT_HERSHEY_PLAIN,4,(0,0,255),3)
elif digit == 4:
    cv2.putText(img,'DOWN',(300,100),cv2.FONT_HERSHEY_PLAIN,4,(0,0,255),3)
```

判斷隨機產生出的數字,在畫面上顯示出指令字樣

#### 三、結果

Youtube 連結: https://youtu.be/ZSOMJY0NBT4

#### 四、結論

原先之遊戲設定為:每隔 1~3 秒(按得分狀況調秒數),不論是否完成指令皆更新指令。但因為不會用 python 中的 thread,嘗試多種寫法仍失敗,無法將主要程式動作和停頓 1~3 秒才產生指令這兩件事合理的處理,故改變遊戲玩法為現在此種。
